Faizan Khan

Senior Data Engineer | Lakehouse, Streaming & Knowledge Graph Platforms
+91 9113250660 faizankhanbusinezz@gmail.com /faizan-khan-a64443213 /thedownface

Summary

Senior Data Engineer with 4 years of experience designing and owning cloud lakehouse platforms, batch and streaming pipelines, and knowledge graphs for high-stakes, real-time domains. Built a CDC streaming platform (Debezium → Kafka-compatible Redpanda → Spark Structured Streaming) that moved risk data from 15–25 minute latency to near real-time in financial services, and currently build ontology-driven knowledge graphs on Stardog with MCP serving layers. Strong track record in reliability, observability, and cost efficiency of production data infrastructure.

Professional Experience

Software Engineer – Data + AI — Craftlabs Jul 2026 – Present, Bangalore

- Designing and building a **USDM-compliant knowledge graph in Stardog**: modeling ontologies for clinical study entities and relationships so that data from multiple source systems resolves into one connected, queryable graph for client GSK.
- Building the end-to-end pipeline on **Databricks and Azure Data Factory** (Source Systems → Raw → Foundation → Trusted → Knowledge Graph), harmonizing heterogeneous multi-source data with spec-driven development.
- Building an **MCP (Model Context Protocol) server** on top of the knowledge graph, exposing trusted, governed data as APIs and tools for LLM and AI-agent consumption.

Staff Data Engineer — StoneX Group Inc. Jan 2025 – Jul 2026, Bangalore

- Architected and led **GROOT**, a multi-agent platform (LangGraph) integrating Databricks, ServiceNow, Confluence, and Datadog for automated incident investigation, root cause analysis, and job monitoring, improving the **reliability and observability** of production data infrastructure; adopted by 70+ engineers across engineering and support teams.
- Built **FinOps tooling** surfacing cluster, job, and SQL warehouse cost to engineering teams, driving proactive cost optimization across Databricks workloads.

Data Engineer — StoneX Group Inc. Mar 2023 – Dec 2024, Bangalore

- Led the redesign of the **risk data platform**: replaced Airflow/SSMS/Dremio dependencies with a **CDC streaming pipeline** (Debezium → Redpanda → Databricks Structured Streaming), cut schema complexity from 180+ to 60 columns through stakeholder and BA alignment, and reduced data availability latency from 15–25 minutes to **near real-time**.
- Led migration of 20+ legacy StreamSets pipelines to a **Databricks lakehouse** (Medallion architecture, Delta Lake), decommissioning the platform, reducing Salesforce data-load failures, and cutting infrastructure cost by **$50K annually**.
- Built and operated scheduled **Airflow** pipelines (Python, Pandas) transforming securities lending market data into stakeholder-defined formats, automating delivery to enterprise locations and meeting **all SLA targets**.

Technical Skills

Languages: Python, SQL, PySpark, Java, JavaScript/TypeScript
Data Engineering: Apache Spark, Spark Structured Streaming, Databricks, Delta Lake, Kafka, Redpanda, Debezium (CDC), Airflow, Azure Data Factory, StreamSets, Medallion / Lakehouse Architecture
Graph & Semantic: Stardog Knowledge Graphs, Ontology Modeling, USDM, Graph Data Modeling, MCP Servers
Databases & Storage: PostgreSQL, PostGIS, pgvector, Delta Lake, Azure Data Lake; OLAP vs. OLTP design
Cloud, APIs & Ops: Azure, GCP (Cloud Run), REST APIs (FastAPI), GitHub, Datadog (monitoring & alerting)
AI / Agentic: LangGraph, LangChain, Azure OpenAI, Vector Search, Databricks Genie Spaces, Agentic Memory Systems

Education

B.E. in Computer Science Engineering — CMR Institute of Technology, Bangalore May 2023

Certifications & Achievements

- Databricks Certified Data Engineer Associate
- Star Performer Award and AI Champion recognition – for technical leadership, platform delivery, and GitHub Copilot adoption.
- Winner, StoneX Enterprise AI Hackathon – built an AI-assisted trade-matching and email-sentiment analysis tool for trade operations.
